

STALE FILES AUDIT

Audit date: 2026-05-12
Current version: v4.0.0
Auditor: Automated review + manual inspection

Summary

Category	Count	Decision
Canonical (current)	2	✔ Keep
Auto-generated (current build)	9	✔ Keep — rebuild when SSoT changes
Deep-dive technical (v3.1→v4.0)	3	✔ Keep — data updated 2026-05-10
Advanced visualizations (v3.1/v4.0)	21	✔ Keep — compressor charts updated
Core triage plots	5	✔ Keep
Navigator & Hub	2	✔ Keep
Archived (moved this session)	3	📦 Archive — docs/archive/
Hero pages (v3.0)	7	⚠ Keep with caveat — no system-level data conflicts
Legacy visualizations (v3.0)	27	⚠ Keep — valve-level data still valid
Legacy tables (v3.0)	4	⚠ Keep — valve-level data still valid
Legacy build outputs	~30	🗑 Can delete — no traceability value beyond snapshots
Coverage reports (htmlcov)	~30	🗑 Dev-only — gitignored, re-generated on test

Detailed File-by-File Review

1. Canonical Presentations — KEEP

File	Version	Decision	Rationale
docs/index_v4_0.html	v4.0.0	★ Keep	Canonical 42-slide master. References “3 or 4” in design discussion context — acceptable.
docs/STAKEHOLDER_PRESENTATION.html	v4.0.0	★ Keep	Canonical 10-slide executive. Fully v4.0.0 aligned.

Minor notes:

- index_v4_0.html line 472 says “4× with VFD” in a comparison table row for FSD575 — this is in context of the design options table, not a data error.
- STAKEHOLDER_PRESENTATION.html references “v3.1.0” only in context of “corrected from v3.1.0” — acceptable.

2. Auto-Generated Triage Pages — KEEP (rebuild when SSoT changes)

File	Generator	Last Built	Decision
docs/index.html	src/build_dashboard.py	2026-05-12	 Keep — just rebuilt to v4.0.0
docs/NAVIGATOR.html	Manual (this session)	2026-05-12	 Keep — new navigator
docs/dashboard.html	src/generate_dashboard.py	2026-05-08	 Keep — data valid, rebuild recommended
docs/executive_summary.html	src/generate_dashboard.py	2026-05-08	 Keep — same
docs/calculations.html	src/generate_dashboard.py	2026-05-08	 Keep — core calculations haven't changed
docs/rtm_traceability.html	src/generate_dashboard.py	2026-05-08	 Keep
docs/handover.html	src/build_handover.py	2026-05-08	 Keep
docs/triage_compliance.html	src/build_all.py	2026-05-08	 Keep — 92 KB compliance grid

3. Deep-Dive Technical Pages — KEEP

File	Version	Updated	Decision
docs/compressors/HP_Redundancy_Analysis.html	v3.1→v4.0	2026-05-10	 Keep — updated with 3-compressor data
docs/compressors/WCS_HP_Protection.html	v3.1→v4.0	2026-05-10	 Keep — updated
docs/liquid_he/Liquid_Operations_Guide.html	v3.1→v4.0	2026-05-10	 Keep — updated

Note: `HP_Redundancy_Analysis.html` references “v3.1” in one line (“CORRECTED from 4 units in v3.1.0”) — contextual, not stale.

4. Advanced Visualizations (`docs/visualizations_v3/`) — **KEEP**

21 interactive Plotly charts. Compressor-related charts (4 of 21) were regenerated 2026-05-10 with v4.0.0 data.

The remaining 17 are pure physics/statistics charts that don’t reference compressor count or CAPEX.

No action needed. Added `README.md` to directory for clarity.

5. Core Triage Plots (`docs/plots/`) — **KEEP**

5 plots generated by `src/generate_dashboard.py`. Leak-rate physics — independent of compressor count.

6. Hero Pages (`docs/heroes/`) — **KEEP WITH CAVEAT**

File	Audience	Decision	Rationale
<code>docs/heroes/design.html</code>	Design engineer	 Keep	Valve-level data only, no system/compressor info
<code>docs/heroes/risk.html</code>	Risk/safety	 Keep	Same
<code>docs/heroes/materials.html</code>	Materials specialist	 Keep	Same
<code>docs/heroes/operations.html</code>	Operations team	 Keep	Same
<code>docs/heroes/control.html</code>	Controls/instrumentation	 Keep	Same
<code>docs/heroes/cost.html</code>	Cost/procurement	 Keep	Same
<code>docs/heroes/interface.html</code>	Interface engineer	 Keep	Same

Caveat: These are v3.0-era audience-specific landing pages. They contain valve-level CAPEX and leak-rate data that is **not** affected by the v4.0.0 compressor correction. However, they lack the SSoT reference and current version tag. They are **not** included in stakeholder distribution bundles.

Future action: Regenerate with v4.0 templates when `src/build_heroes.py` pipeline is created.

7. Legacy Visualizations (`docs/visualizations/`) — **KEEP**

27 charts from v3.0 era. All valve-level and physics-based — no compressor or system CAPEX data that conflicts with v4.0.0. These are embedded/referenced by hero pages and older presentations.

Decision: Keep in place. Do NOT distribute standalone. Mark as “v3.0 reference data” in NAVIGATOR.

8. Legacy Tables (docs/tables/) — ⚠️ KEEP

File	Content	Decision
heli-um_loss_by_valve_count.html	Valve-level loss data	⚠️ Keep — physics valid
material_costs.html	Material cost comparison	⚠️ Keep — valve CAPEX valid
operating_conditions.html	Temperature/pressure conditions	⚠️ Keep — independent of compressor count
supplier_comparison.html	Supplier comparison	⚠️ Keep — valve data valid

9. Legacy Build Outputs (outputs/) — 🗑️ CAN DELETE

Directory	Content	Decision
outputs/html/	OUTPUT_1_BASELINE original (10 pages + 5 plots)	🗑️ Legacy v1 — superseded by triage system
outputs/versioned/..._093824Z/	Timestamped snapshot 1	🗑️ Snapshot — no unique value
outputs/versioned/..._093929Z/	Timestamped snapshot 2	🗑️ Snapshot — no unique value
outputs/json/	Legacy JSON exports	🗑️ Replaced by outputs/tables/*.json
outputs/md/	Legacy markdown exports	🗑️ Replaced by docs/source/*.md
outputs/tables/	Current CSV/JSON tables	✅ Keep — current build output
outputs/tables_v31/	v3.1 tables	⚠️ Can delete — superseded by outputs/tables/
outputs/plots/	Current plot HTML	✅ Keep — mirrored to docs/plots/

Action taken: None (deletion is optional — these are gitignored via outputs/versioned/). Recommend cleanup in next sprint.

10. Coverage Reports (htmlcov/) — 🗑️ DEV-ONLY

30 files auto-generated by pytest-cov . Gitignored. Regenerated on every test run.

No action needed.

11. Source Scripts with “v3” in Name

File	Purpose	Decision
src/build_v3_1.py	Generator for v3.1 master navigator	✓ Keep — source code for archival traceability
src/generate_visuals_v3.py	Generator for advanced analytics charts	✓ Keep — still actively used for visualization generation

12. Other Data/Config Files

File	Decision
docs/tables_v3/ (13 CSV files)	⚠ Keep — intermediate data, referenced by visualizations_v3
docs/data_exports/	✓ Keep if exists — JSON/CSV data exports
docs/helium_properties/	✓ Keep — He property database
docs/notes/	✓ Keep — technical notes
docs/standards/	✓ Keep — compliance documentation
docs/statistical/	✓ Keep — statistical analysis outputs

Files Actioned This Session

Action	File	Details
Archived	<code>docs/index_v3_1.html</code> → <code>docs/archive/index_v3_1_0_ARCHIVE.html</code>	Added deprecation banner, removed from root
Archived	<code>docs/index_v3.html</code> → <code>docs/archive/index_v3_0_0_ARCHIVE.html</code>	Added deprecation banner, removed from root
Archived	<code>docs/presentation.html</code> → <code>docs/archive/presentation_v2_5_0_ARCHIVE.html</code>	Added deprecation banner, removed from root
Rebuilt	<code>docs/index.html</code>	Regenerated via <code>build_dashboard.py</code> — now shows v4.0.0
Created	<code>docs/NAVIGATOR.html</code>	New quick-access navigator
Created	<code>docs/archive/README.md</code>	Archive documentation
Created	<code>docs/visualizations_v3/README.md</code>	Chart directory documentation

Recommended Future Cleanup (not blocking v4.0.0)

1. **Delete** `outputs/html/` and `outputs/versioned/` — no traceability value beyond what's in git history
2. **Delete** `outputs/json/` and `outputs/md/` — superseded by `outputs/tables/` and `docs/source/`
3. **Regenerate hero pages** — create `src/build_heroes.py` to auto-generate from SSoT
4. **Unify build pipeline** — single `build.sh` that generates everything from `config.yaml`
5. **Add** `<meta name="dashboard-version">` to all auto-generated pages
