

GitHub Pages Visual Setup Guide

Your Mission

Get this URL live: https://gbogeb.github.io/cryo_leak_rate_dashboard/

 **Time: 5 minutes**

Step 1: Navigate to Pages Settings

Option A: Via Repository Settings

1. **Go to:** https://github.com/GB0GEB/cryo_leak_rate_dashboard
2. Click **"Settings"** tab (top right)
3. Scroll to **"Pages"** in left sidebar

Option B: Direct Link (Faster)

https://github.com/GB0GEB/cryo_leak_rate_dashboard/settings/pages

Step 2: Configure Build and Deployment

You'll see a page titled **"GitHub Pages"**

Find the "Build and deployment" section:

The screenshot shows the GitHub Pages settings page. A red box highlights the 'Build and deployment' section. Inside this section, there are three sub-sections: 'Source', 'Branch', and a deployment path field. The 'Source' section has a dropdown menu set to 'Deploy from a branch'. The 'Branch' section has a dropdown menu set to 'main' and a text input field containing '/docs'. A '[Save]' button is located to the right of the deployment path field.

Configure these 3 fields:

1. **Source dropdown:**
 - Click dropdown

- Select: **“Deploy from a branch”**
- (NOT “GitHub Actions”)

2. **Branch dropdown 1:**

- Click first dropdown
- Select: **“main”**

3. **Branch dropdown 2:**

- Click second dropdown
- Select: **“/docs”**
- (This tells GitHub to serve from the docs/ folder)

4. Click **“Save”** button

Step 3: Wait for Deployment

After clicking Save, you'll see:

 Your GitHub Pages site is currently being built from the /docs folder in the main branch.

Wait 2-3 minutes for deployment to complete.

Refresh the page after waiting.

Step 4: Get Your Live URL

After deployment completes, you'll see:

 Your site is live at
`https://gbogeb.github.io/
cryo_leak_rate_dashboard/`
[Visit site →]

Click the **“Visit site”** button or copy the URL!

Step 5: Verify Deployment

Your site should show the **VERSION SELECTOR** landing page:

If you see this, **SUCCESS!** 🎉

Troubleshooting

Issue: “404 - Page not found”

Solutions:

1. Wait 5 more minutes (deployment still in progress)
2. Clear browser cache (Ctrl+Shift+R or Cmd+Shift+R)
3. Check URL is exactly: `gbogeb.github.io/cryo_leak_rate_dashboard/`
4. Verify `/docs` folder exists in your repo

Issue: “Branch dropdown shows ‘None’”

Solution: Wait 1 minute and refresh – GitHub is indexing

Issue: “Cannot access Settings tab”

Solution:

1. Make sure you’re logged into GitHub
2. Verify you have admin access to the repo
3. Check repo is public (or you have GitHub Pro for private Pages)

Issue: Page loads but looks broken

Solutions:

1. Check browser console for errors (F12)
2. Wait for all resources to load
3. Try a different browser
4. Report errors in browser console

Success Checklist

After setup, verify these:

- [] URL loads: `https://gbogeb.github.io/cryo_leak_rate_dashboard/`
 - [] `VERSION_SELECTOR` page displays
 - [] Can click “Enter Dashboard” button
 - [] `NAVIGATOR.html` loads
 - [] Technical presentation loads (42 slides)
 - [] At least one visualization loads (Plotly chart)
 - [] No 404 errors in navigation
-

What Happens Next

After Pages is configured:

1. Automatic Updates:

- Every `git push` to main automatically updates the site
- Changes appear in ~2 minutes

2. All HTML Files Accessible:

- All HTML files in `docs/` are now live
- Direct URLs work (e.g., `.../NAVIGATOR.html`)

3. Professional URLs:

- Share with stakeholders
 - Add to documentation
 - Include in presentations
-

After Setup

Tell me: “Pages configured” or “Site is live”

I will:

- Create verification report
- Test all URLs
- Create final deployment checklist
- Generate GitHub Release
- Update all documentation with live URLs
