

HTML Deliverables Organization Plan

Generated: 2026-05-18

Project: MYRRHA QPLANT Cryogenic Engineering Ecosystem

Scope: All HTML deliverables across v3 (material properties) and v4 (leak rate analysis)

1 — Current HTML Inventory

1.1 v4.0.0 — Leak Rate Analysis Dashboard (cryo_leak_rate_dashboard)

Location: /home/ubuntu/cryo_leak_rate_dashboard/docs/
Remote: ⚠ No GitHub remote yet — needs cryo_leak_rate_dashboard repo creation
Total HTML files: 84

Canonical Presentations (3)

File	Slides	Audience	Status
index_v4_0.html	42	Technical master navigator	✓ v4.0.0 canonical
STAKEHOLDER_PRESENTATION.html	10	Executive / decision-makers	✓ v4.0.0 aligned
NAVIGATOR.html	—	Main entry point (card-based)	✓ v4.0.0 aligned

Triage Dashboard Pages (7)

File	Purpose	Status
index.html	Landing / handover hub	🔄 Auto-generated
dashboard.html	Engineer triage view	🔄 Auto-generated
executive_summary.html	Executive triage view	🔄 Auto-generated
calculations.html	Detailed calculations	🔄 Auto-generated
rtm_traceability.html	RTM traceability matrix	🔄 Auto-generated
handover.html	Formal handover document	🔄 Auto-generated
triage_compliance.html	Standards compliance grid	🔄 Auto-generated

Visualizations — docs/visualizations/ (27 files)

- 18 × chartNN series (leak vs loss, temp sensitivity, pressure, valve size, seal materials, suppliers, cost, radiation, welding, warm/cold service, guard systems, Monte Carlo, sensitivity, lifecycle TCO, valve replacement)
- 9 × legacy charts (cost waterfall, enhanced leak rate, helium sankey, maintenance gantt, Monte Carlo cost, risk heatmap, scenario comparison, sensitivity tornado, supplier comparison)

Visualizations — docs/visualizations_v3/ (22 files)

- 16 × v3.0 advanced analytics (extended leak vs loss, temp effect, choked flow, purity dilution, internal/external, helium properties, compressibility, lifecycle standards, fleet sensitivity, MC histogram/scatter, cost breakdown box, scree, biplot, correlation heatmap)
- 6 × v3.1 additions (liquid inventory depletion, compressor availability, boiloff vs leakrate, WCS HP architecture, redundancy cost benefit, VFD energy savings)

Plots — docs/plots/ (5 files)

- Core triage plots: leak vs loss, temp/pressure effects, cost vs leaktightness, fleet sensitivity, reliability

Hero Pages — docs/heroes/ (10 files)

- executive, technical, compliance, design, risk, materials, operations, control, cost, interface

Topic-Specific Pages (3)

- compressors/HP_Redundancy_Analysis.html
- compressors/WCS_HP_Protection.html
- liquid_he/Liquid_Operations_Guide.html

Tables — docs/tables/ (4 files)

- supplier comparison, helium loss by valve count, material costs, operating conditions

Archive — docs/archive/ (3 files)

- index_v3_0_0_ARCHIVE.html — v3.0 navigator (archived)
- index_v3_1_0_ARCHIVE.html — v3.1 navigator (archived)
- presentation_v2_5_0_ARCHIVE.html — v2.5 presentation (archived)

1.2 v3 (v0.4.9) — Material Properties Dashboard (document-organization-system)

Location: cryo_dashboard_v0_3_0/cryo_dashboard_v0_3_0/ within document-organization-system

Remote: github.com/GBOGEB/document-organization-system (<https://github.com/GBOGEB/document-organization-system>)

GitHub Pages: [Live](https://gbogeb.github.io/document-organization-system/cryo_dashboard_v0_3_0/cryo_dashboard_v0_3_0/) (https://gbogeb.github.io/document-organization-system/cryo_dashboard_v0_3_0/cryo_dashboard_v0_3_0/)

Total HTML files: 7

File	Purpose	Status
<code>index.html</code>	Landing page	✓ Active
<code>dashboard_modular.html</code>	Primary interactive dashboard	✓ Active (v0.4.9)
<code>materi- al_properties_dashboard_v1_ 10.html</code>	Legacy self-contained fallback	✓ Active
<code>files.html</code>	File navigator	✓ Active
<code>html_preview_hub.html</code>	Preview hub	✓ Active
<code>ssot_launcher.html</code>	SSOT launcher	✓ Active
<code>index_slides.html</code>	Presentation slides	✓ Active

Additional HTML in doc-org-system

- `docs/analysis/charts/` — 7 performance analysis charts (cache hit rates, complexity, errors, performance, pipeline, processing time, resource utilization)
 - `Automation/Metadata_diffs_log_reviewable.html` — Metadata diff viewer
-

2 — Repository Assignment Strategy

✓ Recommended: Option C — Separate Repos with Cross-Links + GitHub Pages

Why Option C?

Factor	Evaluation
Independence	✓ v3 evolves independently (already at v0.4.9 with 23 PRs)
Scope clarity	✓ v3 = material properties, v4 = leak rates — different domains
GitHub Pages	✓ Each repo gets its own Pages site
Cross-references	✓ VERSION_SELECTOR.html links both
No breakage	✓ v3 URLs remain stable, v4 gets new clean URLs
Team workflow	✓ Engineers can work on either without conflicts

Why NOT submodules?

- v3 is NOT a dependency of v4 — it's a separate engineering tool

- Submodule complexity is not justified for a cross-link relationship
- Both repos update independently at different cadences

3 — Deployment Plan

Step 1: Create `cryo_leak_rate_dashboard` repo on GitHub

```
# User must create the repo on github.com/GBOGEB
# Then add remote and push
cd /home/ubuntu/cryo_leak_rate_dashboard
git remote add origin https://github.com/GBOGEB/cryo_leak_rate_dashboard.git
git push -u origin main
```

Step 2: Restructure docs/ for GitHub Pages

```
docs/
├── index.html                # VERSION_SELECTOR (new root landing)
├── v4/                      # All v4 content (moved from docs/)
│   ├── NAVIGATOR.html
│   ├── index_v4_0.html
│   ├── STAKEHOLDER_PRESENTATION.html
│   ├── dashboard.html
│   ├── calculations.html
│   ├── executive_summary.html
│   ├── rtm_traceability.html
│   ├── handover.html
│   ├── triage_compliance.html
│   ├── visualizations/
│   ├── visualizations_v3/
│   ├── plots/
│   ├── heroes/
│   ├── compressors/
│   ├── liquid_he/
│   ├── tables/
│   ├── archive/
│   └── assets/
└── material-properties/     # Redirect page → v3 GitHub Pages
```

Step 3: Enable GitHub Pages

```
Repository Settings → Pages
Source: Deploy from branch
Branch: main
Folder: /docs
```

Step 4: Cross-Link v3 ↔ v4

- v4 VERSION_SELECTOR.html links to v3 GitHub Pages
- v3 index.html or ssot_launcher.html can link back to v4

4 — URL Structure After Deployment

v4 Leak Rate Dashboard

URL	Content
<code>gbogeb.github.io/cryo_leak_rate_dashboard/</code>	Version selector (landing)
<code>gbogeb.github.io/cryo_leak_rate_dashboard/v4/NAVIGATOR.html</code>	Main entry point
<code>gbogeb.github.io/cryo_leak_rate_dashboard/v4/index_v4_0.html</code>	42-slide navigator
<code>gbogeb.github.io/cryo_leak_rate_dashboard/v4/STAKEHOLDER_PRESENTATION.html</code>	Executive 10-slide deck

v3 Material Properties Dashboard (existing — no changes)

URL	Content
<code>gbogeb.github.io/document-organization-system/.../index.html</code>	v3 Landing
<code>gbogeb.github.io/document-organization-system/.../dashboard_modular.html</code>	Interactive dashboard
<code>gbogeb.github.io/document-organization-system/.../index_slides.html</code>	Presentation

5 — Migration Considerations

Files NOT to move

- `docs/presentation.html` — legacy v2.5 (stays in archive)
- `docs/presentation.pdf` — static PDF (stays as-is)
- `outputs/html/` — build artifacts (not for GitHub Pages)
- `htmlcov/` — test coverage (dev-only)

Build system updates needed

- `src/build_dashboard.py` → update output paths to `docs/v4/`
- `src/generate_dashboard.py` → update `DOCS_DIR` to `docs/v4/`
- `src/build_all.py` → update asset copy paths
- `setup.sh`, `build.sh`, `validate.sh` → update references

Risk: Breaking relative paths

- All `../assets/style.css` references in HTML need audit

- Plot iframe `src` paths need update
- Hero page cross-links need update
- **Mitigation:** Run link checker after migration

6 — Summary

Item	Count	Location
v4 HTML files	84	<code>cryo_leak_rate_dashboard/docs/</code>
v3 HTML files	7 + 8	<code>document-organization-system/cryo_dashboard_v0_3_0/</code>
Total HTML deliverables	99	Across 2 repos
Repos involved	2	Separate, cross-linked
GitHub Pages sites	2	Independent deployment
