

Immediate Actions — What to Do RIGHT NOW

Generated: 2026-05-18

Priority: Unblock cryo_leak_rate_dashboard deployment

Action 1 — Push cryo_leak_rate_dashboard to GitHub 5 min

Why: This repo has NO remote. All v4.0.0 work exists only locally.

Option A: Create new repo on GitHub

1. Go to <https://github.com/new>
2. Repository name: `cryo_leak_rate_dashboard`
3. Description: `MYRRHA QPLANT – Cryogenic Helium Leak-Rate Analysis Dashboard v4.0.0`
4. Public ☒
5. **Do NOT** initialize with README (we have one)
6. Click “Create repository”

Then run:

```
cd /home/ubuntu/cryo_leak_rate_dashboard
git remote add origin https://github.com/GB0GEB/cryo_leak_rate_dashboard.git
git branch -M main
git push -u origin main
```

Option B: Use existing repo (if already created)

```
cd /home/ubuntu/cryo_leak_rate_dashboard
git remote add origin https://github.com/GB0GEB/cryo_leak_rate_dashboard.git
git push -u origin main
```

Verify:

```
git remote -v
# Should show: origin https://github.com/GB0GEB/cryo_leak_rate_dashboard.git
```

Action 2 — Enable GitHub Pages 2 min

1. Go to: https://github.com/GB0GEB/cryo_leak_rate_dashboard/settings/pages
2. Source: **Deploy from a branch**
3. Branch: `main`
4. Folder: `/docs`

5. Click **Save**

Verify:

- Wait ~60 seconds
- Open: https://gbogeb.github.io/cryo_leak_rate_dashboard/
- Open: https://gbogeb.github.io/cryo_leak_rate_dashboard/index_v4_0.html

Action 3 — Create organization docs PR 5 min

```
cd /home/ubuntu/cryo_leak_rate_dashboard
git checkout -b feature/repo-organization-plan
git add GITHUB_REPO_ORGANIZATION.md PR_STRATEGY.md MIGRATION_CHECKLIST.md IMMEDIATE_ACTIONS.md
git add repo_templates/
git commit -m "docs: add multi-repo organization plan for QPLANT engineering ecosystem"
git push -u origin feature/repo-organization-plan
```

Then create PR on GitHub.

Action 4 — Tag v4.0.0 release 2 min

After merging the org docs PR:

```
git checkout main
git pull
git tag -a v4.0.0 -m "Release v4.0.0: SSoT Implementation, 42-slide navigator, corrected physics engine"
git push origin v4.0.0
```

Then create GitHub Release at https://github.com/GB0GEB/cryo_leak_rate_dashboard/releases/new

Action 5 — Upload specs to DOCX_RTM_Automation

10 min

```
cd /home/ubuntu
git clone --depth=50 https://github.com/GB0GEB/DOCX_RTM_Automation.git /home/ubuntu/
github_repos/DOCX_RTM_Automation
cd /home/ubuntu/github_repos/DOCX_RTM_Automation

git checkout -b feature/add-qplant-specs

# Create folders
mkdir -p contracts addenda specifications requirements

# Copy files
cp "/home/ubuntu/Uploads/QPS_Contract_pdf.pdf" contracts/
cp "/home/ubuntu/Shared/Uploads/QPS_Contract_mirror_DOCX.pdf" contracts/
cp "/home/ubuntu/Shared/Uploads/QPS (Addendum II)_Master.docx" addenda/
cp "/home/ubuntu/Uploads/Addendum II - Cryoplant Technical Requirements.docx" ad-
denda/
cp "/home/ubuntu/Uploads/Addendum II - Cryoplant Technical Requirement-
s1212_1521.docx" addenda/
cp "/home/ubuntu/Uploads/Technical Addendum_Reliability centred_linked to QPLANT
Reliability Consideration.docx" addenda/
cp "/home/ubuntu/Uploads/QPLANT_HV02 exhaust for KAEZER (1).docx" specifications/
cp "/home/ubuntu/Uploads/QPLANT_Helium Recovery and Supply MAC - CR1299.docx" spe-
cifications/
cp "/home/ubuntu/Uploads/QPLANT_Interface and Terminal Points_ACC NF.docx" specifica-
tions/
cp "/home/ubuntu/Uploads/SoR_Requirements_Matrix.csv" requirements/

git add -A
git commit -m "docs: add QPLANT contract specs, addenda, and SoR matrix"
git push -u origin feature/add-qplant-specs
```

Action 6 — Add warm compressor analysis to ABACUS

5 min

```
cd /home/ubuntu
# NOTE: ABACUS is 82 MB — use sparse checkout if needed
git clone --depth=50 https://github.com/GB0GEB/ABACUS.git /home/ubuntu/github_repos/
ABACUS
cd /home/ubuntu/github_repos/ABACUS

git checkout -b feature/add-compressor-analysis
mkdir -p analyses/compressors
cp "/home/ubuntu/Uploads/MYRRHA warm-compressor comparison A.md" analyses/compressors/

git add -A
git commit -m "docs: add MYRRHA warm-compressor comparison (ALaT FSD 575 vs LKT FSD
475)"
git push -u origin feature/add-compressor-analysis
```

**Total Estimated Time: ~30 minutes**

#	Action	Time	Blocker?
1	Push dashboard to GitHub	5 min	● Critical — unlocks everything
2	Enable GitHub Pages	2 min	Depends on #1
3	Create org docs PR	5 min	Depends on #1
4	Tag v4.0.0	2 min	Depends on #3 merge
5	Upload specs to DOCX_RTM	10 min	Independent
6	Add analysis to ABACUS	5 min	Independent

**Success Criteria**

After completing all actions:

- [] `cryo_leak_rate_dashboard` is on GitHub with remote configured
- [] GitHub Pages serves the v4.0.0 dashboard
- [] Organization docs PR is created (or merged)
- [] v4.0.0 is tagged
- [] Contract/spec documents are in DOCX_RTM_Automation
- [] Warm compressor analysis is in ABACUS
- [] All 5 core repos have cross-references in READMEs
